flexibly created.
- **Details**
easily discovered.

Organizational charts comfortably created

We provide the modules. You are the architect of your organizational chart. In orginio, you can create with minimum effort. Structures can be created from scratch or based on existing data. Positions plans and employees are illustrated.

Flexible editing and display - anytime, anywhere

In orginio, the organizational chart can be retrieved anytime, from anywhere. Edit mode is activated depending on access rights, allowing only certain users to work on the organizational chart. This way data can be created, changed and various designs can be selected.

In display mode, every employee can navigate interactively through the corporate structure. Information can be quickly located using the search function.

Restructure via Drag&Drop

orginio allows you to respond to changes quickly and simply. It's easier to move positions, employees or teams in the organizational chart via Drag&Drop than to delete and recreate every single box manually.

No setup effort – start right away

After the one-time online registration, orginio can be started immediately without any setup effort. The first 50 employees can be visualized free of charge in the Software-as-a-Service application.

Data security

All data you have uploaded to orginio is securely and reliably stored in ISO 27001 certified data centers. When you register you can decide if your data is stored in an American or European data center. The US data center at Amazon Web Services (AWS) meets the requirements of the most security-sensitive organizations all over the world. Besides extraordinary safety measures the German data center, Hetzner Online, is characterized by an excellent connection to the European Internet. The data center is supplied entirely with green electricity.
