

# SYNCDOG: End-to-End Mobile Security Solution

SyncDog offers a FIPS 140-2 Certified, AES 256 bit encrypted, end-to-end mobile security solution. The modular solution enables organizations to custom fit their mobility policies and security measures and align them to the specific needs of the various roles and titles of their entire employee base – down to the individual user. Users will be better equipped to get the job done, with the data they need, with the device they have on hand, at the moment they need to do it. It will no longer matter if the device is iOS or Android, Managed or Un-Managed, Corporate Owned or personal (BYOD) – all can be supported through a single solution. SyncDog protects and manages the device, detects and prevents malware/phishing and other intrusions, encrypts and isolates all the corporate or government data/files/apps that are accessed by or stored on the device and offers a private app store for distribution of internal native or hybrid apps. All from a single vendor, from a single download and centrally managed in a single administrative console.

## 1.0 - MDM Solution

Protect and manage devices controlled by the organization.

- iOS
- Android
- MacOS
- Windows

## 2.0 - MTD Solution

• Mobile Threat Defense (MTD) – choose between Symantec Endpoint Protection (SEP) or Zimperium.

### 3.0 - Trusted Mobile Workspace

SyncDog Trusted Mobile Workspace (TMW) – CERTIFIED FIPS 140-2, AES 256-bit encrypted containerized workspace that secures and isolates corporate and sensitive data from personal information on a single device – whether managed or unmanaged – COPE or BYOD – iOS or Android.

- **Email Application** – Full Exchange and 365 integration
