THE FASTEST WAY TO MODEL,
ANALYZE, AND SUBMIT COMPLIANT FEDERAL
COST PROPOSALS.

Contractor Edition

Our database architecture stores all estimates, formulas, and qualitative information related to developing cost proposals, ensures complete real-time visibility into all indirect and direct rates, and allows manipulation of data to provide completely customizable cost breakdowns and roll-ups.

A Database-Driven Proposal Solution

ProPricer software replaces homegrown and excel-based pricing tools with a centralized database-driven solution that provides an organized, standardized, and efficient platform. The software is a single home for all of your proposals that gives your team quick access to review, reuse, and report on current and historical pricing data.

Consistently Submit Accurate Cost Proposals in Less Time

ProPricer allows teams to save countless hours and easily pinpoint mistakes that may have gone unnoticed for years. The built-in logic of your cost model eliminates formula errors saving hours of validating rates and inconsistent labeling between estimates.

Perform Limitless Analysis in a Fraction of the Time

With ProPricer "what-if" capabilities, users can easily analyze multiple scenarios the cost impact of project timeline changes, the effect of reaching a target price, swap hours or costs from one resource to another, and any number of changes to your resources and rates. Let ProPricer do the work of automatically repricing the affected elements to see the impact.

Accelerate DCAA Audits

Present your data to win and comply. With forward pricing and negotiated rates for each proposal stored in one central location, providing documentation becomes a matter of a few mouse clicks. Additionally, our reports allow you to choose from over 90 common reports, or design your own with the ability to deliver the exact documentation required by your customer or auditor.

Integrate Your Systems

If your organization is looking to seamlessly share ProPricer data between ERP, COTS Windows applications, or custom homegrown software, we have the technical and functional expertise to deliver a quality solution for your back-office environmentwith our custom API Services.
