

GOVERNMENT PROPERTY MANAGERS

One Property Management System That Does It All

Winning federal contracts can be lucrative and provide growth opportunities. But being awarded a contract also means complying with laws and regulations unique to government contractors. Many property managers and property administrators are unprepared for the many rules, from asset identification with IUID to data exchange with the GFP Module, that may or may not apply to their contracts. This can lead to costly errors.

A2B Tracking provides the essential system for the Property Manager by simplifying these challenges with a complete Government Property Management System called UC! Web™ that was specifically designed to comply with FAR 52.245-1 (Government Property), DFARS 252.211-7003 (Item Identification and Valuation), DFARS 252.211-7007 (Reporting of Government Furnished Property) and DFARS 252.245-7003 (Contractor Property Management System Administrator). It's different from other systems because it was designed from the ground up with military standards for asset identification (IUID and RFID) as well as data exchange with PIEE, WAWF, GFP Module and IUID Registry as core capabilities yet flexible enough to handle all GFP, CAP and corporate property.

Military Compliance For Acquisitions and Property

One Solution to Meet all Requirements:

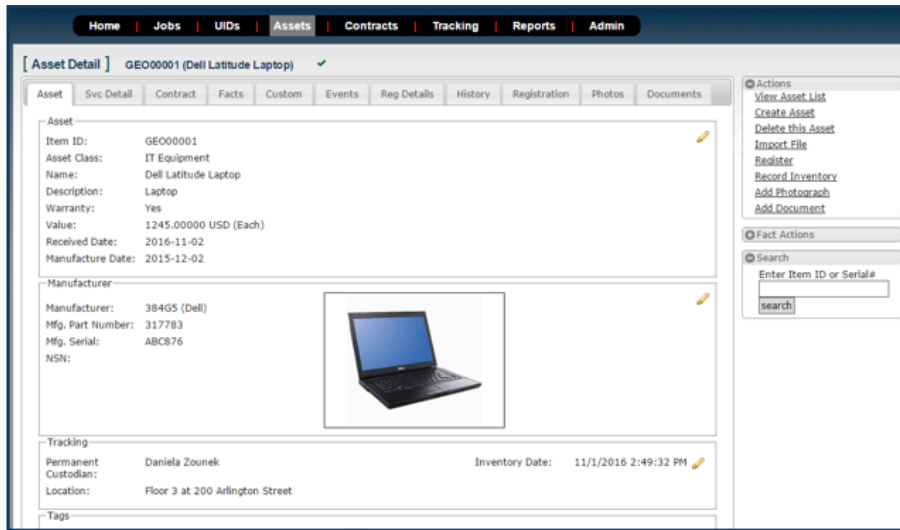

- **FAR 52.245-1 Government Property**
- **DFARS 252.211-7003 Item Identification and Valuation**
- **DFARS 252.211-7007 Reporting of Government Furnished Property**
- **DFARS 252.211-7006 Passive Radio Frequency Identification**
- **DFARS 252.245-7001 Tagging, Label, and Marking of Government-Furnished Property**
- **DFARS 252.245-7002 Reporting Loss of Government Property**
- **DFARS 252.245-7003 Contractor Property Management System Administration**
- **DFARS 252.245-7004 Reporting, Reutilization, and Disposal**
- **DFARS 252.242-7005 Contractor Business System**

An integrated mobile platform empowers you to capture asset events from tablets or touch computers – manage asset records, perform inventories or validate unique UIIDs against the UIID Registry. Asset management wherever you need it.

UC! Web™ was designed for enterprise asset management, tracking and reporting from acquisition and receipt through final disposition. Capture and record all historical events and transaction history. Manage contract and sub-contract data and asset assignments. Print, mark, track, ship and update the status of any asset using UIID or RFID throughout its lifecycle and perform physical inventories throughout the year. UC! Web™ is military-grade software that lives in the cloud and helps you take control of your assets and inventory by tracking and reporting serialized and non-serialized items. Generate DD250s, DD1149s, DD1348s and other custody transfer documentation automatically. UC! Web™ facilitates compliance for branches of the military as well as DoD contractors and suppliers who support them. Plus, you'll be using best practices set by the U.S. military for asset tracking and reporting of shipments.

Secure and Cloud-Based Access from Anywhere

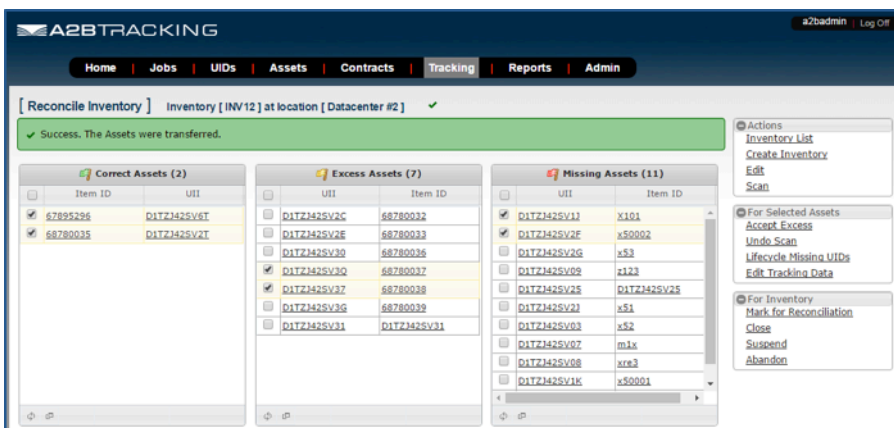

UC! Web™ manages all asset details and events from acquisition through disposal.

What Sets UC! Web™ Apart

- > One system, fully integrated. No confusing modules or costly separate purchases.
- > Advanced barcode and RFID data capture from one system, covering all modern asset tracking methods.
- > Integrated with mobile computing devices such as industrial scanners, tablets and smart phones.
- > Automated data exchange and integration to WAWF, PIEE, GFP Module, EDA and IUID Registry for property and end items.
- > Reports all military asset types and shipments, property transfers and asset lifecycle events.
- > Secure and cloud-based with certified ITAR or self-hosted software deployment options.
- > More intuitive with faster deployment and integration than the competition with web services API.
- > Captures and stores IUID validation results as part of the integrated audit trail.
- > Creates IUID and RFID labels and plates in-house or through A2B Tracking manufacturing facilities which ship to your door.

UC! Web lives in the cloud, so you can manage items across multiple locations anytime, from anywhere, and automatically receive software updates with the latest features.

UC! Web™ reconciles inventories by exception with:
1. a simple barcode or RFID scan or
2. drag and drop capability.

About A2B Tracking

A2B Tracking has pioneered military-grade enterprise-class solutions for tracking and managing critical assets for DoD agencies and the contractors who support them. We'll help your enterprise take control of your assets by providing you a complete Government Property Management Business System that incorporates advanced barcode and RFID technologies. We enable total IUID compliance and robust audit trails for complete lifecycle asset management to meet FAR 52.245-1.

GOVERNMENT PROPERTY MANAGEMENT

Achieve total compliance to FAR 52.245-1, DoD's Government Property Management clause. UC! Web provides IUID compliance, robust audit trails throughout the entire asset lifecycle and automated reporting to PIEE, WAWF, GFP module, EDA and IUID Registry to sustain DCMA audit readiness.

ANYTIME, ANYWHERE ACCESS

Capture, manage and track your assets in the cloud from your desktop, laptop or mobile device. UC! Web is web accessible to provide automated asset management capability – around the globe.

ASSET TRACKING

Track and trace the location, movement, custody and condition of items 30x faster for inventory accuracy of 99% or better. Track shipments, case and pallet. Take advantage of advanced barcode and RFID technology with the latest mobile and fixed readers.

COMPLIANCE

Meet DoD's MIL-STD-130 and -129 standards. Capture, manage and trace serialized items using IUID. Meet DoD invoice and shipment requirements with automated data exchange to WAWF, military shipping labels with RFID, and electronic submission to government systems.

INVENTORY

Perform accurate inventory processes 30x faster with UC! Web by leveraging fixed and mobile RFID and advanced barcode with integration to UC! Web. Monitor item counts, reconcile inventory, identify missing items or overstocks and plan and reassign accordingly.

MOBILE READY

Scan and edit detailed data, and perform accurate inventory, from any mobile device that connects with UC! Web from the cloud. Get visibility from remote areas and be confident you'll always know where your assets are.

ASSET MANAGEMENT

Manage asset pedigree and lifecycle events from a single application. Control unique asset identification, create embedded relationships, monitor condition, manage jobs and contracts, and reconcile inventory.

ASSET IDENTIFICATION

Import or scan items with RFID or 2D Data Matrix barcodes into UC! Web for tracking asset events such as moves or custody changes. Print, validate and verify labels for readability and accuracy, and check against assets already in the IUID Registry.

REPORTING

UC! Web gives you better asset and compliance data so you can make better strategic decisions. Application-ready reports with search and filter features draw from precise data to pinpoint asset locations and provide valuable insight into asset utilization.

INTEGRATION

Improve workflow and avoid redundant data entry by leveraging data managed in UC! Web. UC! Web's API integrates with other legacy software (e.g. Costpoint, Oracle) in your organization for greater asset visibility and solution scalability across your enterprise.

CALL THE EXPERTS

Learn more about how UC! Web will give you greater visibility and control over all your assets and provide your organization with a complete Government Property Management Business System to meet tough government contract requirements.
